Classic, black and exceptional: the innovative prym.ergonomics double-pointed knitting needles 'Carbon Technology' are

Product information

the result of unique knitting needle production technology. The sturdy, yet flexible and light material enhances your pleasure in knitting socks or sleeves. They are somewhat stiffer and firmer to work with than the white prym.ergonomics knitting needles. This is especially useful for knitters, who want to produce a tight stitch structure. The shaft's surface is very smooth and its shape changes from round to triangular to allow the stitches to glide freely. The drop-shaped tips make it easier to pick up and guide the yarn and the yarn does not slide so quickly from the tip. The elegant black double-pointed knitting needles 'Carbon Technology' are available in 15 cm and 20 cm length. In addition, they are available in the finest 2.00 mm needle gauge and are therefore perfect for fine knitting projects, such as baby socks. In contrast to metal needles in these gauges, the carbon knitting needles nestle snugly in your hand.
